TITLE: An algorithm for Armenian-Russian machine translation. I (General description) 16

SOURCE: Problemy kibernetiki, no. 14, 1965, 221-244

TOPIC TAGS: translation algorithm, machine translation, syntactic analysis, syntactic synthesis, idiom identification

ABSTRACT: The algorithm for Armenian-Russian machine translation whose general description is presented in this article is based on the principle of independent analysis and synthesis. This means that during the first stage of the operation the machine carries out the grammatical and meaning analysis of the Armenian text while during the second it synthesizes the corresponding Russian text on the basis of the information gathered during the analysis. The authors outline the structure of the dictionary and the method of morphological synthesis of the Russian sen-

tence and describe the labels used by the algorithm during the syntactic analysis and label synthesis. They also describe procedures for arriving at the correct meaning of multiple meaning words and for the identification of idioms. The article concludes with four examples of translation of mathematical texts. "The authors thank V. V. IVANOV, O. S. Kulagina, I. A. Mel'chuk, T. N. Moloshnaya and V. A. Uspenskiy for their help, fruitful ideas and valuable advice." Orig. art. has: 13 formulas and 2 tables.

TITLE: An algorithm for Armenian-Russian machine translation. II (Realization of the program) 160

SOURCE: Problemy kibernetiki, no. 14, 1965, 245-266

TOPIC TAGS: translation algorithm, machine translation, sentence coding

ABSTRACT: This is the second part of a paper describing an algorithm for Armenian-Russian machine translation developed at the Vychislitel'nyy Tsentr (Computer Center) AN Arm. SSR and YerGU. It describes the realization of the program of the algorithm on an automatic digital computer having a 2048-cell operative and 4096-cell outer memory. The basic principles of all the concepts utilized are due to O. S. Kulagina (Problemy kibernetiki, no. 2, 1959, 289-302). An outline of the algorithm's structure and the method of sentence coding is followed by a description of the scheme of the algorithm and of all the auxiliary information. A brief summary of the master and interpretation programs is also

Blood transfusion after strychnine poisoning. A. G. Karavany and A. E. Perel'shtcin. *Med. exp. (Ukr. J. Med. Sci.)* No. 1, 55-60 (1937).—Lethal doses of strychnine (0.0005 g./kg. body weight) were injected subcutaneously into dogs. Bleeding always shortened the lives of the poisoned animals. Blood transfusion (with or without bleeding) did not prevent death of the poisoned dogs. S. A. Corson

The effect of lowered atmospheric pressure on the pH of blood and changes of this index after blood transfusions. A. O. Karavanov and I. B. Blok. *M&S. exptl.* (Ukraine) 1939, No. 1, 43-50; *Khim. Referat. Zhur.* 1939, No. 11, 41.—After blood transfusions the rabbits were able to better withstand a rarified atm. (up to 240 mm.) and the pH of blood shifted in the alk. direction. In the control animals (without transfusions) a lower atm. pressure caused a change of pH in the acid direction.

TITLE: On the Reaction of Sulfur and Inorganic Sulfides With the Complex Compounds of Dialkyl Trichloro Phosphines and of Aluminum Chloride (O vzaimodeystvii sery i neorganicheskikh sul'fidov s kompleksnymi soyedineniyami dialkiltrikhlorfosfinov i khloristogo alyuminiya)

PERIODICAL: Zhurnal obshchey khimii, 1958, Vol 28, Nr 11, pp 2958 - 2960 (USSR)

ABSTRACT: The initial complex compounds of the dialkyl tri-chloro phosphines with $AlCl_3$ remained unknown until recently. According to reference 1 it was mentioned that alkyl dichloro phosphines in the presence of $AlCl_3$ form solid compounds with alkyl chloride, the complexes themselves were, however, not characterized. The authors obtained the complex compounds also by the reaction of alkyl dichloro phosphine with alkyl chloride and aluminum chloride according to the scheme

Card 1/3

the Complex Compounds of Dialkyl Trichloro Phosphines and of Aluminum
Chloride

complexes of dimethyl, methyl-ethyl, and diethyl tri-
chloro phosphine with AlCl_3 were synthesized. They are
white crystalline compounds that easily enter
reaction with others. On their heating with sulfur or
arsenic, antimony, phosphorus, or aluminum sulfides and
other compounds in the presence of freshly annealed
potassium chloride the acid chloride of the dialkyl
thiophosphinic acid is obtained:

chloride in this case binds the aluminum chloride
which fact considerably increases the yield of
perchloric anhydride of the acid. The physical constants of
the acid chlorides of dimethyl, methyl-ethyl, and
diethyl thiophosphinic acids synthesized by the
authors agree with those described in publications (Ref 2).
There are 2 references, 1 Soviet reference.

pp 2960 - 2962 (USSR)

ABSTRACT: The authors investigated the reaction of the complex
compounds of the alkyl tetrachloro phosphines and of
aluminum chloride with sulfur, sulfides of metals and
non-metals. On a heating of the mixture of the said
complex with sulfur in the presence of freshly annealed
potassium chloride the acid dichlorides of the alkyl
thiophosphinic acid in a yield of 80% is obtained
according to the scheme:

Card 1/3
$$\text{RPhl}_4 \cdot \text{AlCl}_3 \xrightarrow{\text{KCl} + \text{S}} \text{RP(S)Cl}_2 + \text{KCl} \cdot \text{AlCl}_3 + \text{sulfur chlorides.}$$

On the Reaction of Sulfur and of Inorganic Sulfides SOV/79-28-11-12/55
With Complex Compounds of the Alkyl Tetrachloro Phosphines and of
Aluminum Chloride

Potassium chloride is used as binding agent of aluminum chloride. Otherwise the yield is decreased to 25-30%. On a heating of the complex compounds with aluminum, potassium, arsenic, antimony, phosphorus sulfide and others in the presence of KCl, the acid dichlorides of the alkyl thiophosphinic acid (yield 70%) are obtained. On a heating of the complex of AlCl_3 and trichloro methyl tetrachloro phosphine with sulfur the initial components phosphorus trichloride and carbon tetrachloride are separated. TITLE: On New Methods of Synthesizing Alkyl Dichloro Phosphines
and Dialkyl Chloro Phosphines (O novykh metodakh polu-
cheniya alkildikhlorfosfinov i dialkikhlorfosfinov)

PERIODICAL: Zhurnal obshchey khimii, 1958, Vol 28, Nr 11,
pp 2963 - 2965 (USSR)

ABSTRACT: The authors devised new convenient methods of
synthesizing alkyl dichloro phosphine (I) and dialkyl
chloro phosphine (II). They consist in the reduction
of the complex compound of alkyl tetrachloro phosphines
or dialkyl trichloro phosphines with $AlCl_3$ by means
of metallic aluminum, red phosphorus and metallic
sodium in the presence of freshly annealed KCl (Scheme).
As found already earlier KCl considerably increases
the yields. Metallic aluminum in the form of aluminum
dust proved to be the best reducing agent. Raw
phosphorus in the reaction process yields PCl_3 which
hampers the formation of phosphines. The reaction

Card 1/3

On New Methods of Synthesizing Alkyl Dichloro
Phosphines and Dialkyl Chloro Phosphines

SOV/79-28-11-13/55

of metallic sodium takes place very turbulently which fact also decreases the yields. The above mentioned initial complex compounds are accessible and are correspondingly easily obtained from alkyl chloride, AlCl_3 , and PCl_3 , or alkyl dichloro phosphine (Ref 8). To determine the properties and the structure of the dimethyl, methyl-ethyl, diethyl chloro phosphines resulting from the complex compounds sulfur was affiliated to them:

chlorides of dimethyl, methyl-ethyl, and diethyl thiophosphinic acid were separated. Their constants agree with those mentioned in publications (Ref 7). The affiliation of sulfur to the dialkyl chloro phosphines is much easier than it is to the alkyl dichloro phosphines. There are 8 references, 1 Soviet reference.

TITLE: Study of complex compounds of alkyl- and polyalkylchlorophosphines with aluminum chloride. IV. Reaction of complex compounds of alkyl tetrachloro- and dialkyltrichlorophosphanes and aluminum chloride with ethylmercaptan and potassium thiocyanide

SOURCE: Zhurnal obshchey khimii, v. 35, no. 1, 1965, 78-79

TOPIC TAGS: complex molecule, chemical reaction, organic phosphorous compound, mercaptan, aluminum chloride, cyanide

ABSTRACT: The reactions of complex compounds alkyltetrachlorophosphines (I) and dialkylchlorophosphanes (II) with ethylmercaptan and potassium thiocyanide were studied. In the reaction of the complex of (I) and (II) with ethyl mercaptan in the presence of calcined potassium chloride, alkylchlorophosphine sulfides (III) are formed with yields up to 75% and dialkylchlorophosphane sulfides (IV) with a yield up to 50%. The reactions evidently occur in two stages. Initially, addition products of ethylmercaptan to the complexes of (I) and (II) are formed with the liberation of hydrogen chloride. Further heating leads to separation of ethylchloride and the products (III) and (IV). Upon heating of the complex compounds

TITLE: Reaction of alkylidichlorophosphine oxides with carboxylic acid amides

SOURCE: Zhurnal obshchey khimii, v. 35, no. 10, 1965, 1879

TOPIC TAGS: phosphorus compound, carboxylic acid, organic amide, acetic anhydride, phosphinic acid, chemical identification, distillation

ABSTRACT: It has been established for the first time that the reaction of alkylidichlorophosphine oxides with carboxylic acid amides forms anhydrides of alkylphosphinic acids and compounds containing a cyano group. The reaction can be carried out in a solvent (boiling carbon tetrachloride) or without it at 100-130°C. In the latter case the reaction is much faster. The end products are apparently formed in three states:

Reactions of methyl- and ethyldichlorophosphine oxides with amides of formic, acetic, and trifluoroacetic acids were carried out.

Anhydrides of alkylphosphinic acids (CH_3PO_2 , $C_2H_5PO_2$) are formed

in 96% yield. They were identified by elementary analysis and by determining the acidity. Compounds containing a cyano group (HCN, CH_3CN , CF_3CN) were separated by fractional distillation and analyzed. Their content was 93-96%. [JPRS: 36,328]

TITLE: Pentacovalent phosphorus compounds. Interaction of methyltetrafluorophosphine with carboxylic acid anhydrides

SOURCE: Zhurnal obshchey khimii v. 36, no. 8, 1966, 1507

TOPIC TAGS: alkylphosphine, carboxylic acid anhydride, fluorinated organic compound

ABSTRACT: Methyltetrafluorophosphine was found to react with acetic, propionic, and butyric anhydrides, forming methyldifluorophosphine oxide and fluorides of the corresponding acids. The reaction rate drops with increasing molecular weight of the carboxylic acid anhydride, and the yield of the substances formed decreases. The authors intend to publish a further series of reports on the chemistry of pentacovalent phosphorus compounds under the title, "Derivatives of Phosphorus Acids Containing the P-F Bond." TITLE:

Steric Hindrances in Organomagnesium Reactions. XX. The
Synthesis of Esters of Secondary α -Hydroxy Acids of the
Aliphatic and Alicyclic Series

PERIODICAL: Zhurnal obshchey khimii, 1960, Vol. 30, No. 5, pp. 1638-1643

TEXT: It had been determined in earlier papers by the first-named author (Refs. 1-6) that the reaction of oxalic acid diesters with aromatic organomagnesium compounds can be checked in the first stage of the reaction under relatively simple conditions. The complex compound which forms in this first stage of the reaction is unstable and decomposes at the boiling point of the ethereal solution (40-42°) according to a given pattern (Ref. 3). Esters of α -hydroxy acid, which contain the hydroxyl group secondarily bound, form by hydrolysis from the decomposition products. In the present report this process is used for the synthesis of aliphatic and alicyclic α -hydroxy carboxyl acid esters. When the organomagnesium compound contains an alkyl radical in the place of an aryl

Card 1/2

 XX. The Synthesis of Esters of Secondary B005/B125
 α -Hydroxy Acids of the Aliphatic and Alicyclic Series

radical, the complex compound forming in the first stage of the reaction is more stable and decomposes at temperatures of 110-120°. The complete decomposition of the complex can be attained by the addition of toluene, the distilling of the ether and the subsequent boiling of the toluene solution for two hours. When the complex compound contains an alicyclic radical, it decomposes just as in the case of an aryl radical at the boiling of the ethereal solution. The carrying out of all the named organo-magnesium syntheses is thoroughly described in an experimental section. X
 The authors synthesized in this way 19 α -hydroxy acid esters, which had not yet been described in publications. The yield, boiling point (or melting point), gross formula, and percentage composition of the elements are given in a Table for each of these new esters; the refractive index, the density, and molar refraction are given additionally for the liquid esters. There are 1 table and 8 references, 6 of which are Soviet.

TITLE: The Equations of Curved Sandwich Shells with Light Filling for Finite Displacements (Uravneniya plogikh trekhsloynnykh obolochek s legkim zapolnitelem pri konechnykh smesheni-
yakh)

PERIODICAL: Izvestiya Vysshikh Uchebnykh Zavedeniy, Aviatsionnaya Tekhnika, 1958, Nr 1, pp 69 - 77 (USSR).

ABSTRACT: This paper gives a generalisation of Reissner's solution (Ref 1) for finite deformations of rectangular sandwich plates on curved sandwich shells. The equations are deduced for curved sandwich shells with a light filling for finite displacements inside the surface of the load bearing layers, in which the filling undergoes small deformations. It is assumed that the thin isotropic load bearing layers are subject to the Kirchhoff-Love hypothesis. The filling is assumed light, isotropic and elastic. The thickness of the load bearing layers is assumed small in comparison with the general thickness of the sandwich shell. In deriving the equations, the intrinsic bending strength of the load bearing layers is ignored and in the filling only the transverse displacement and the transverse compressive deformation are taken into

Card 1/2

with a Light Filling

PERIODICAL: Moscow. Aviatsionnyy institut. Trudy. No. 130,
1960, Prochnost' aviatsionnykh konstruktsiy.
pp. 110 - 132

TEXT: The paper is a continuation of previous work by the
same author (Ref. 1 - Izvestiya vysshikh uchebnykh zavedeniy,
Mashinostroyeniye, 1958, No. 6) where the basic formulae are
quoted but not derived. In this paper the formulae are derived.
The obtained formulae are similar to the equations of the theory
of thin uniform axis-symmetric shells of E. Meissner (Ref. 3 -
Physikalische Zeitschrift, Vol. 14, No. 8, 1913). The material
of the shell is of sandwich construction, consisting of outer
bearing layers of metal, plastic, plywood, etc. and a light
filling layer of honeycomb construction, corrugated material or
foam plastic. The analysis is based on concepts proposed by

Ref.2

E. Reissner (NACA Rep. 957, 1950) using the same notations. The following assumptions are made: 1) the bending rigidity of the bearing layers can be neglected; 2) the modulus of normal elasticity and shear of the filler are zero in the longitudinal direction and differ from zero in the transverse direction; 3) the filler is regarded as comparatively thick, light, elastic and isotropic, with a relatively low modulus of elasticity; 4) the difference in the lengths of the middle surfaces of the inner and outer layers is to be taken into account. On the basis of these assumptions, the geometry of the shell, the equilibrium of the bearing layers, stress distribution in the filler, and the potential energy of deformation of the shell are considered. The relations between stresses, moments and displacements in the shell are expressed as three equilibrium equations and five relations between stresses and displacements. From these eight equations the eight unknowns can be determined, i.e. the two normal stresses, the shearing stress, two bending moments and three displacements. The eight equations are reduced to two simultaneous second-

TITLE: Stability and above-critical behavior under compression of triple-layered tapered cylindrical shells with a light filler

SOURCE: Moscow. Aviatsionnyy institut. Voprosy prochnosti i ustoychivosti elementov tonkostennykh konstruktsiy, no. 1, 1963, 87-96

TOPIC TAGS: buckling, cylindrical shell, tapered shell, sandwich panel, sandwich panel buckling, buckling load

ABSTRACT: The above-critical behavior of a compressed triple-layered cylindrical panel is investigated, and qualitative and quantitative load loss results are presented after instability occurs. The equilibrium equations for this case were derived by L. M. Kurshin (Uravneniya trekhsloynnykh tsilindricheskikh obolochek s legkim zapornitelem, Izv. otd. tekhnich. nauk. AN SSSR, No. 3, 1958, stp. 142-144). After providing suitable boundary conditions (loose ends, clamped edge along the axial direction) and integrating, the equation relating the critical load m_t and the bending parameter \mathcal{L} is expressed as follows: $m_t = m_t + + A\mathcal{L}^2 - Bk\mathcal{L}$ (where

w_0 = bending at $x = \frac{a}{2}$, $y = \frac{b}{2}$, a = length, b = circumference, m_t = upper critical load, γ = bending stiffness parameter, Ω = shear strength parameter of filler, and

$$m_t^* = \frac{1}{\psi^2 \left[0.75 + \Omega \left(1 + \frac{3}{\psi^2} \right) \right]} \left\{ (1 + \gamma) [2 + (1 + \psi^2)^2] + \right. \\ \left. + \gamma \frac{4\Omega}{\psi^2} [2 + (1 + \psi^2)^2] + \right. \\ \left. + 8^2 \frac{\psi^4}{16} \left\{ \left[2 + \frac{1}{(1 + \psi^2)^2} \right] + \frac{4\Omega}{\psi^2} \left(2 + \frac{1}{1 + \psi^2} \right) \right\} \right\};$$

$$A = \frac{1}{\psi^2 \left[0.75 + \Omega \left(1 + \frac{3}{\psi^2} \right) \right]} \left\{ (\psi^2 + 4\Omega) \left[\frac{17}{16\psi^2} + \frac{\psi^2}{2(4 + \psi^2)^2} + \frac{\psi^2}{16} \right] + \right. \\ \left. + \Omega \left[\frac{9}{4} + \frac{\psi^4}{(4 + \psi^2)^2} + \frac{\psi^4}{4} \right] \right\};$$

Card 2/4

ACCESSION NO: AT3003029

$$B = \frac{\psi^2}{4m\pi \left[0.75 + \Omega \left(1 + \frac{3}{\psi^2} \right) \right]} \left\{ \frac{16}{3} \frac{1}{(1+\psi^2)^2} \left[1 + 2\Omega \left(1 + \frac{5}{\psi^2} \right) \right] + \right. \\ \left. + \frac{8}{3} \frac{1}{(4+\psi^2)^2} \left[1 + 4\Omega \left(1 + \frac{4}{\psi^2} \right) \right] + \left(3 + \frac{80\Omega}{3\psi^2} \right) \right\};$$

$$m_t = \frac{4P_1 b^2 (1-\mu^2)}{\pi^2 C^* (h+t)^2}; \quad k^2 = \frac{4(1-\mu^2) b^4}{\pi^4 R^2 (h+t)^2};$$

$$\eta = \frac{2D_n}{D} = \frac{1}{3} \left(\frac{t}{h+t} \right)^2; \quad \psi = \frac{2\lambda}{m};$$

$$\Omega = \frac{\pi^2 C h}{4 b^2 G_c}; \quad \xi = \frac{2 \sqrt{1-\mu^2}}{h+t} f;$$

$$f = \frac{w_0}{2}; \quad \lambda = \frac{a}{b}; \quad C = \frac{C^*}{1-\mu^2};$$

A table of values of ψ , m_t , A , Bk and \mathcal{F}_0 is given as a function of m for the special case $\lambda = 1$, $k^2 = 10$, $\Omega = 2$, $\frac{t}{h+t} = 0.01$ and also the function $m_t = f(\mathcal{F})$

Card 3/4

for this case is tabulated as a function of Ω . Analysis of this and other cases shows that for the normal range of Ω for light filler the ratio $\gamma = \frac{m_t^+}{m_t^-}$ (decrease of load after instability occurs, m_t^- = lower critical load parameter) is not effected by Ω . γ decreases with increasing m and becomes 1 when $m = 5$. The results of the investigation show that for the case of a light filler the linear theory sufficiently describes the behavior and does not require the exact solution, while for stiff fillers the linear theory is insufficient. TITLE: On large deflections of a clamped cylindrical light-core sandwich panel under uniform normal pressure

SOURCE: Moscow. Aviatzionnyy institut. Voprosy prochnosti i ustoychivosti elementov tonkostennykh konstruktov, no. 1, 1963, 97-109

TOPIC TAGS: sandwich-panel buckling, sandwich-panel snapping, upper critical pressure, lower critical pressure, buckling, snapping, sandwich panel, critical pressure

ABSTRACT: Large deflections of a rectangular cylindrical shallow symmetrical light-core sandwich panel, clamped on all edges, are determined in the first approximation. The panel is under uniform normal pressure acting on its convex side; the material of its faces and core is isotropic, homogeneous, and elastic. It is assumed that the core resists only transverse shear and is rigid in this direction; the displacements in the face layers are finite, and the flexural rigidity of the latter is negligible. The nonlinear equations of equilibrium and of compatibility of strains are used as initial ones. Two alternatives in

arrangement of the panel edges are considered: 1) the clamped edges are fixed and 2) the clamped edges are movable in their plane. In each case the conditions for the occurrence of the "oil-can" effect are analyzed, and expressions for the upper and lower critical (buckling) pressures and for the associated deflections are derived. The values of the pressures and deflection for panels of certain length-to-width ratios and curvature parameters are given in tables and diagrams. The minimum values of the curvature parameter at which the "oil-can" effect takes place are also given. The need for checking the strength both of the core as related to transverse shear and of its joint with faces is mentioned. Orig. art. has: 2 figures, 5 tables, and 33 formulas.
